IT SERVICES

ABOUT US

SYXELA specializes in competitive solutions that drive sustainable business growth, offering personalized and professional service. Founded on June 10, 2009, SYXELA.LLC is a Hispanic-owned company dedicated to helping clients resolve challenges.

WHY CHOOSE SYXELA

SYXELA Syxela leads in integrating new communication technologies, expanding client possibilities. Their solutions start with design teams defining project specs, operational parameters, and site specifics based on requirements.

DIFFERENTIATION

SYXELA stands out by offering comprehensive technology solutions in automation, IT, and telecommunications, with a focus on operational efficiency and security. Their services include PLC programming, software development, network security, structured cabling, and wireless networks, ensuring high connectivity and reliability for businesses.

SERVICES

Cloud Services: Cloud platforms enable remote data storage and access, allowing team members to work from anywhere and run business applications without installation.

Backup Solutions: Backup services protect against data loss by storing copies on external devices or cloud platforms, with options like file, server, and desktop backup. Automatic backups ensure data security.

Voice over Internet Protocol (VoIP): VoIP allows internet-based calling and messaging, supporting long-distance communication for businesses across locations.

Software Development: IT teams develop custom software for specific business needs, providing ongoing testing, development, and maintenance.

Hardware Installation and Maintenance: IT services install, maintain, and repair essential hardware, such as computers and network devices, tailored to business requirements.

Troubleshooting and Technical Support: IT support assists with software and hardware issues, guiding users through troubleshooting or arranging repairs.

Network Security: IT services secure company networks with firewalls, antivirus software, VPNs, and regular reviews to prevent unauthorized access.
